

File. Serve. Prove.

One partner, one timeline.

One bundled workflow covers skip tracing, venue confirmation, case initiation, service of process, and proof filing, delivered through a secure SFTP channel and backed by a dedicated high-volume team.

THE CASE INITIATION GRIND

Six steps. Every one of them yours.

Order a skip
trace

Confirm the
venue yourself

File court by
court

Track down a
server

Chase the proof
of service

Build the report

However you split these steps today, InfoTrack handles all of it: skip trace to filed proof, one vendor, one channel, and a team ready to run it at your volume.

WHAT CHANGES

	WITHOUT INFOTRACK	WITH INFOTRACK
The workflow	Skip trace, venue, filing, service, and proof, from different vendors and different systems.	✓ One vendor, one timeline: skip trace, venue confirmation, filing, service of process, and proof, all in a single channel.
Getting the court	You research the venue and hope the filing goes through.	✓ InfoTrack Court Finder validates the court up front, cutting rejections, delays, and lost revenue.
Serve integrity	Little visibility into who served the case or how it was documented.	✓ Vetted, credentialed servers nationwide, with GPS and photo evidence on every attempt, and human diligence review on every non-serve.
Paying for it	Separate invoices and surprise per-address fees.	✓ One bundled per-case price covering the full workflow. No surprise fees.

Why InfoTrack

A dedicated high-volume team, powerful tooling, and diligence reviewed on every job. Automation does the repetitive work so people can do the judgment work.

- Automated filing collapses the initiation timeline: days saved at initiation are days closer to judgment.
- The full chain, one vendor: skip trace, venue, filing, service, and proof through a single channel
- Proprietary technology and in-house support, with a dedicated high-volume team and one accountable account manager
- Enterprise-grade data protection on ServeManager, our SOC-compliant platform
- A large, vetted network of performance-tracked process servers. High bar to join, higher bar to stay.

WHERE IT WORKS TODAY

The full bundled workflow is available now in California and Texas. Additional states are coming.

We build where our clients need us. Ask your InfoTrack rep to confirm coverage for your caseload.

GOOD TO KNOW

Enterprise-grade data protection

ServeManager,
SOC-compliant

Batch delivery, not integration

Secure SFTP, no
IT lift

Simple, transparent pricing

One bundled
per-case rate
